

Monday Nov 17, 2025 4-4:30pm

Agenda:

Sammed Feedback:

- GitHub Issues - not everyone has been assigned issues. He said he only saw 8 people being assigned - are the other people not being assigned?
 - Work isn't being distributed evenly, if people aren't taking up work then there will be deductions to the final grade.
 - Half the people have 1 issue, but some people have multiple issues. There might be a little variety based on the amount of work involved, but it should be more balanced.
 - If multiple people are assigned to a feature, make sure to assign them to the GitHub Issue.
- Asked about sprint timeframe (i.e. what is our current sprint and the dates involved)
 - I said our first sprint was Monday 11/3 - Weds 11/12 (since Veteran's Day and we needed a bit of extra time for the reorg). The current sprint is Thursday 11/13 - Tuesday 11/25, and then the last sprint is Wednesday 11/26 - 12/3.
 - Feel free to change these dates but I thought it made sense given our current timeline.
- Asked about what we accomplished in the last sprint
 - Mentioned the presentation we gave last week about our current progress
- Work Journal
 - Work journal is just GENERAL emotional sentiment about themselves, the team, the course. Doesn't need to mention specific people. However, if we do mention specific people it should be anonymous and not visible to the other student(s) that are mentioned.

CI/CD Pipeline

- Need to have ADRs for everything, i.e. WHY did we choose ESLint vs. Prettier or something else?
- Just a progress check for CI/CD Pipeline tomorrow, doesn't have to be final.
- Do linting for HTML and CSS as well
- Code quality (doesn't need to be all the fancy features, but need some code quality too like Codeclimate)
- Code coverage
- JSDocs
- Prioritize backend for unit tests, prob don't need unit tests for frontend
- Will need unit testing for all the functions (Especially backend, example fetching the class directory. If you're fetching)
 - JUnit test for each function, should run everytime code pushed
- Where will we deploy the app? What platform?
 - State reasoning through ADR
 - Project has to be live and deployed somewhere

Attendance:

- Boqi Zhu
- Andrew Pan
- Audria Montalvo
